MEET-ME III
T-1
AUDIO CONFERENCE BRIDGE

HOW IT WORKS

The **Meet-Me III** (MM-III), is connected to the host phone system via a standard **T-1** interface card.

Audio conferencing with the **MM-III** is achieved either automatically or manually.
 In the Automatic "meet me" method, callers are linked together by dialing a designated phone number, or through an automated attendant.
 Manual conference calls are set up by a coordinator, who places or receives calls to the participants and transfers them to the conference number.
 Whichever method is used, the **MM-III** will answer the callers on the first ring with an entry tone. The first caller into the system will hear the tone and if other callers are already on the bridge, the conversation may begin.

BENEFITS

Even with occasional use, owning your own low cost **MM-III** can pay for itself in less than a year. A conference service can charge over $900.00 for a 24 person, one hour conference call!

Easy to use! No worries about security, Internet Access, P.C. compatibility or other Plug 'N' Pray

Issues! All your users need is a telephone!

FEATURES & SPECIFICATIONS

12 or 24 Ports
T-1 via PBX or PSTN
Insertion loss amplification
3 separate conference rooms, 8 ports per room (24 port model)
Broadcast Listen Only Bridge (Option)
Lockout unused ports
