

# PARK MEET ME CONFERENCE BRIDGE (PKMM)

## Overview

The **Park Meet Me** is a rack-mounted two-port automatic meet-me bridge which permits the automatic connection of two, two-wire analog telephone lines, the "park" port and the "page" port. They can be station lines, CO trunks or a combination thereof.

Parties "parked" in the **Park Meet Me** will receive music-on-hold until the "paged" party is connected.

If the "paged" party does not call the required number within a preselected time, the **Park Meet Me** will transfer the "parked" call to a preselected number.

Press "0" anytime to return to the operator. The **Park Meet Me** provides automatic disconnect, when either or both parties hang up, upon receipt of momentary open or battery reversal.

One **Park Meet Me** card is required for each bridging circuit, which consists of two dedicated telephone lines.

## Operation

When the attendant answers an incoming call and determines that the party being called must be paged, the call is transferred to the "park" port of the **Park Meet Me**.

The calling party then hears one ring, the **Park Meet Me** connects them with customer-supplied music-on-hold.

The called party is then notified via pager, P.A. system or cellular phone of the telephone number of the "page" port of the **Park Meet Me**.

When the called party dials the page port, the music is turned off and the two parties are connected.

When either of the two parties hangs up, the **Park Meet Me** will release upon receipt of a disconnect signal (Dial Tone, Re-order Tone, Call Party Control) if your phone system provides such a signal.

A Recall feature can be programmed so that if the called party fails to respond after a programmable interval, the **Park Meet Me** will transfer the calling party to a programmable 1 to 4 digit extension.

The Park port line must have call transfer enabled in the host phone system.

*One Possible Application*

## Benefits

While many phone systems support call parking, the feature is often limited to only a few "zones". Also, a failed connection will always recall to the original phone that parked the call.

The **Park Meet Me** offers unlimited expansion and flexibility in recall procedures.

Many special call handling applications are possible when using the **Park Meet Me** in conjunction with voice messaging and other CTI platforms.

Give us a call and see how the **Park Meet Me** can help improve customer care and profitability for your business.

## Applications

- "Courtesy Phone" Environments
- Healthcare
- Airports/Bus/Train Stations
- Automobile Dealerships
- College Campus
- Amusement Parks
- Golf Courses
- Retail Stores
- Telecommuting

## Specifications

- 6 or 12 slot shelf mounting
- PBX/Centrex/Hybrid compatible
- 24VDC 200MA
- Voice Announce (optional)
- Music Input
- Operating Temperature: 40-100°F
- Contact Closure for controlling external device
